Sources and recent trend of atmospheric lead over the last fifty years
by isotopic measurements on snow from Dome C, East Antarctic Plateau

Stefano Bertinetti, Francisco Ardini, Alessia Vecchio, Laura Caiazzo and Marco Grotti

Supporting Information

Table S1. Lead concentration and isotopic ratios in the snow samples from Dome C
(uncertainties are 95%-confidence intervals)

Depth (cm)	Year (AD)	Pb (pg/g)	^{208/207} Pb	U	^{206/207} Pb	U

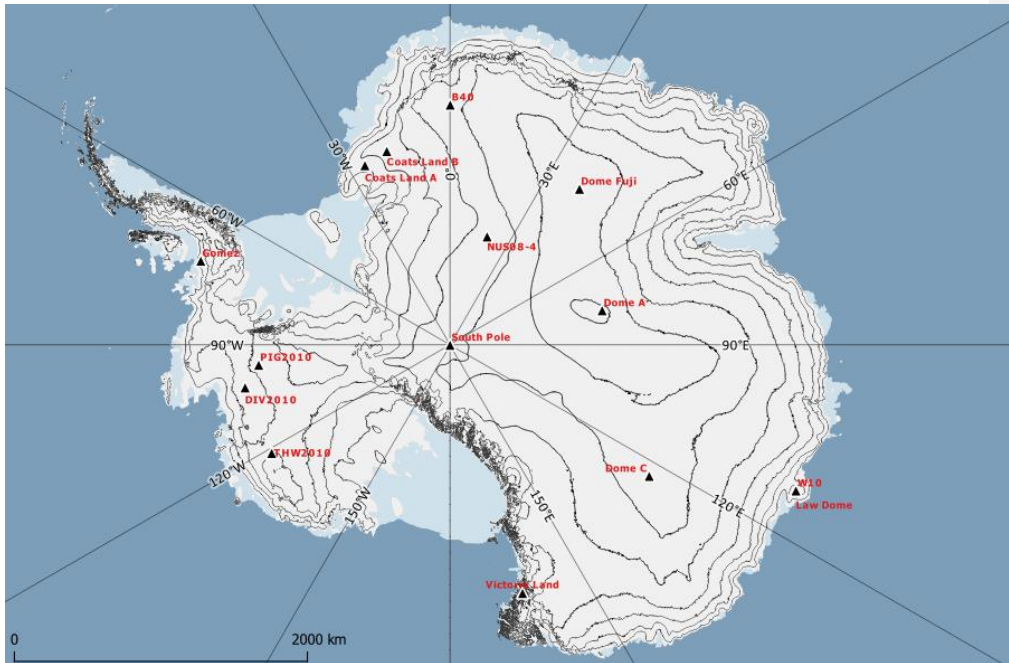

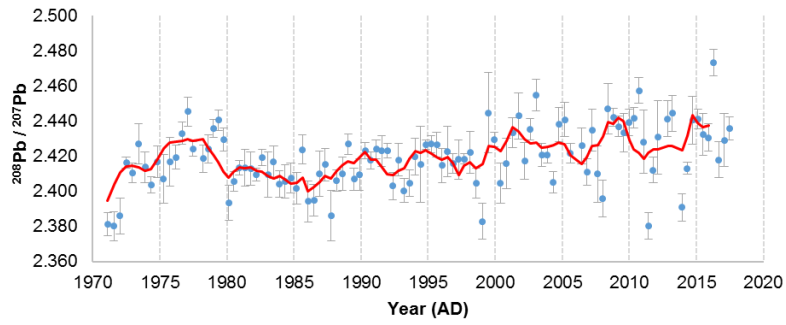

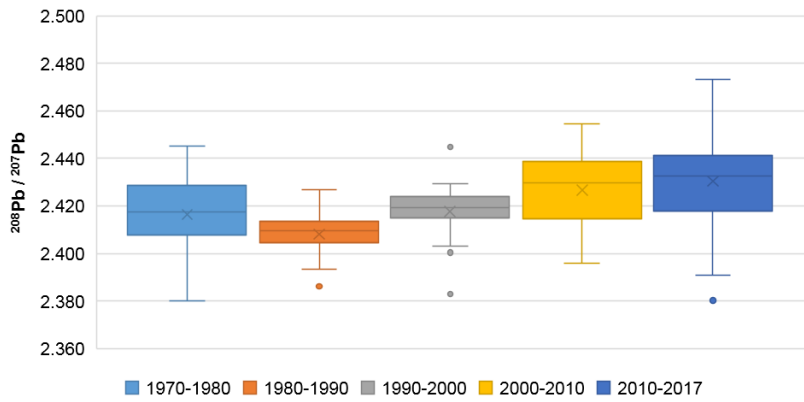

Figure S1. Map of Antarctica showing the locations of Dome C and the other sampling locations referred to in the text. Picture produced by QGIS software with Quantarctica library of Norwegian Polar Institute.

Commentato [b1]: mappa modificata (errore nella trascrizione di un nome)

(a)

(b)

Figure S2. Temporal trend of $^{208}\text{Pb}/^{207}\text{Pb}$ isotopic ratio in snow from Dome C. (a) single data with associated uncertainty and five-point running average; (b) boxplots of data grouped by decades.

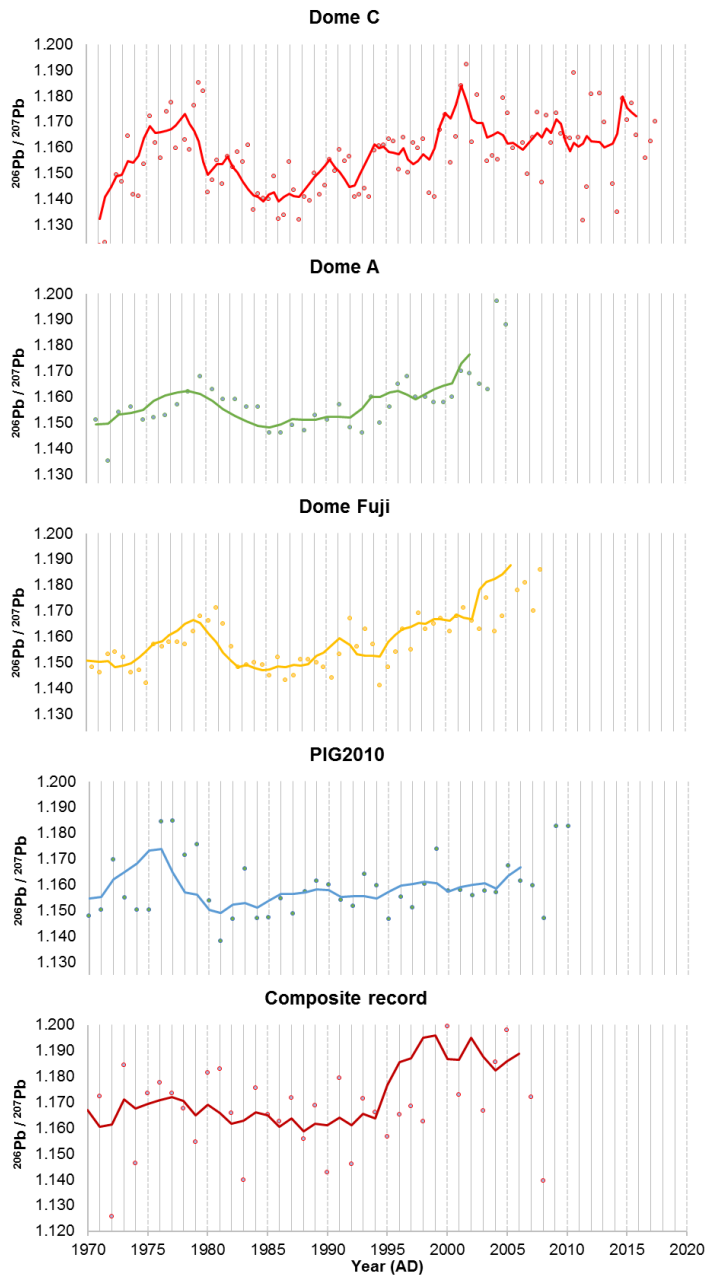

Figure S3. Comparison of the temporal trends of $^{206}\text{Pb}/^{207}\text{Pb}$ isotopic ratio in recent snow from various Antarctic sites: Dome C (this work), Dome A (Chang et al., 2016), Dome Fuji (Chang et al., 2016), FIG2010 ((Mc Connell et al., 2014) and a composite Pb record from 16 ice cores across Antarctica (Mc Connell et al., 2014). See Figure S1 for locations.
