This is a correction notice for article jcz035 (<https://doi.org/10.1093/esr/jcz035>). The authors of the paper would like to replace the incorrect Figure 2 with the correct version of Figure 2.

There is a minor change in the interpretation of Figure 2: “Figure 2 also shows that daughters

(‘Female’) were on average around twice as likely as sons to provide care to their mothers on a weekly basis (‘Male’). The respective figure for fathers is 1.5 times.”

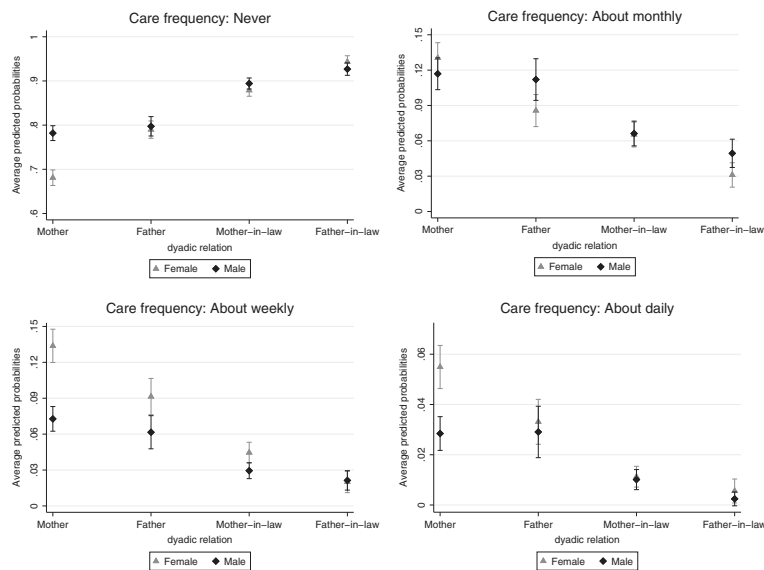

Figure 2. Average predicted probabilities of adult children caregiving to parents(-in-law) by gender and care intensity
