XXIX Reunión de la Sociedad Española de Anatomía Patológica Veterinaria
Cáceres, 14-16 de Junio de 2017
for surgical intervention of patients’ ear. It is understood that medical therapy could be applied at this stage of the need.

For patients with severe otitis media and chronic rhinosinusitis, surgical intervention is often necessary. However, in patients with mild cases of otitis media and acute rhinosinusitis, medical therapy may be sufficient. The decision to undergo surgical intervention should be made in consultation with an ENT specialist.

Further study will be necessary to determine the best approach to surgical intervention for patients with severe cases of otitis media and chronic rhinosinusitis. A multidisciplinary approach involving ENT specialists, allergists, and other specialists may be necessary to provide the best care for these patients.
